

RAUVISIO terra™ soft, textured HPL surface

Comparison with melamine & real wood

Appearance: Natural wood

Material: HPL with soft-touch, textured finish

Construction: PVA laminated face and back

Core: MDF or Particle board

Double-sided: Yes

Edgeband: REHAU LaserEdge & ABS

Horizontal and vertical surface applications: Yes

Board size: 1300 x 3050 x 19.5 mm (51 x 120 in)

Door style: Slab, siena and shaker

Features & benefits:

- Soft touch finish
- Deeply textured wood look and feel
- Impact, chip, fingerprint and scratch resistant
- No painting or staining required
- Resistance to deterioration
- Double-sided finished panel or cabinet door
- Matching floating shelves

Accessory products:

- Floating shelves
- Integrated handles

What is the difference between RAUVISIO terra and textured melamine (TSS)?

RAUVISIO terra	Textured melamine
Deeply textured 0.9 mm HPL laminated to wood core	Deeply textured melamine paper fused to panel
Very durable, impact, heat and moisture resistant	Not as long lasting, chips easily, susceptible to moisture infiltration and swelling
Soft touch finish	Has a more artificial look and feel

Textured melamine: Panels made of very thin decorative paper (typically 0.075 mm thick) that are susceptible to moisture intrusion and much less durable than HPL laminated panels.

What is the difference between RAUVISIO terra and real wood?

RAUVISIO terra	Real wood
Fully-balanced, engineered panel that resists warpage, even on larger doors	Prone to warpage, especially on larger doors
Batch-to-batch color and pattern consistency	Very difficult to match batch-to-batch and color fades over time
Very durable, impact, heat and moisture resistant	Susceptible to moisture infiltration and swelling
More sustainable	More expensive option
Soft touch finish	Requires excess labor costs for finishing

Real wood: Solid and durable, but prone to warpage and decorative stains. Over time, it will fade and discolor and become extremely difficult to match.
